The Cassida 3300 is a fully automatic counterfeit detector that catches 100% of counterfeits, including bleached bills (\$100, \$50, \$20 counterfeits printed on real \$1 or \$5 bills). Combining optical image analysis and IR (infrared), metal thread, and magnetic ink detection, even the most sophisticated forgeries are no match for the 3300.

State-of-the-art Cassida technology protects you against any counterfeits made anywhere in the world. Cassida backs that promise with its exclusive Counterfeit Shield Guarantee: Cassida will reimburse you the full face value of the counterfeit bill should your Cassida 3300 accept it as genuine.

The 3300 does not require users to have bill authentication knowledge. It instantly recognizes the bill's denomination, verifies authenticity, and displays detailed information on the large LCD screen. The 3300 also emits a distinct audible alert when a counterfeit is detected.

Currency counters with detection features only have UV or MG detection. The Cassida 3300 goes much further by also checking for infrared (IR) marks, the most advanced security feature on U.S. bills and the one that is not known to have been counterfeited.

The 3300 is the smallest detector on the market, allowing it to fit almost anywhere. Users can choose to eject authenticated bills through either front or rear slots, further reducing its operating footprint.

The Cassida 3300 accurately recognizes denominations and authenticates bills in under a second.
