These bright brass binding posts and screws are the same shape and size as our aluminum screw posts, but they are made from solid brass. They feature a low-profile, flattened head on both the screw and the post. They have a nice clean look when used for binding leather products, samples, photo albums, scrapbooks, store and trade show displays, and more.

In addition to the appearance of solid brass, these are stronger than the equivalent aluminum posts. Posts and screws are passivated and waxed to help prevent tarnishing. You don't need to buy an expensive binding machines either — just just punch or drill a hole, insert the post, and tighten the screw.

The size given in the table is the thickness of your document (or other materials) that the screwpost will bind together. The quantity per package listed below is the number of sets per package (a set being one post and one screw).

Note: These posts can not be used with our perma-lock screws.

Technical Details

- The post diameter is 0.203" inch (Fits in a 7/32 or 1/4 inch hole.)
- Screw threads are #8-32 (Industry standard for these posts.)
- Screw heads are slotted; post heads are plain.
- The screw and post heads are 0.415 inch diameter.
- The posts are threaded all the way through the post for added strength.
- Sets are supplied with 3/16 inch long screws to fit the posts.
- Screw posts are sold in sets of one post and one screw. The quantity per package is 100 sets.
