The M-18 has been discontinued by the manufacturer. We suggest the [Cassida Omni-ID](#) as a suitable replacement.

The Cassida M-18 uses a high-intensity directional UV illumination to reveal UV security threads even on worn or faded bills. It also brightly illuminates UV-reflective security marks on driver's licenses, credit cards, checks, passports and other documents. Built-in watermark verification can work simultaneously with UV illumination.

UV security features are sometimes difficult to detect, especially on older bills. The M-18's directional UV light shows these features easily, making it easier to verify currency under typical workplace lighting conditions.

The M18 brightly illuminates UV-reflective security marks on driver's licenses, credit cards, checks, passports, and other forms of identification.

Check watermarks at the same time with the backlight built into the inspection platform. Both UV and watermark lamps can be on at the same time for quick authentication.

The M18 requires less desk space than most other UV detectors with a base measuring only 7.3" x 4.7". Ideal for retailers, financial institutions, bars, restaurants and any other business that needs to authenticate cash or ID's.

Features

- Verifies currency, ID's, driver's licenses, credit cards and other documents

- High intensity directional UV illumination
- Shows UV security features even on worn or faded bills
- Built-in Watermark verification
- Ultra compact and portable design
- Ideal for retailers, financial institutions, bars, restaurants and others
