The **PAL-M is a manual paper separator**. The PAL-M is used to optimize the amount of paper to be inserted into the paper punch, not too much and not too little. It will lift the corner of the pile of paper with just the right amount for easy insertion and punching. No more paper jams or inefficient punches. The PAL-M can be used right out of the box in a stand-alone configuration or as a module mounted to any vertical Rhin-O-Tuff OD or HD punch (optional mounting kit available).

Rhin-O-Tuff modular design allows the PAL-M to be mounted on top of the APES (Automatic Paper Ejector and Stacker) system for greater efficiencies. The PAL-M will make any operator an experienced operator. The system offers flexibility enough to handle index tabs, clear covers, and oversized covers.
