The Cassida 85 is built one way: tough. Manufactured from durable steel components, it is designed from the ground up for years of high throughput operation in commercial applications.

The Cassida 85 has been designed to handle both crisp, new bills and bills that are nearing the end of their lives, accurately processing all bills, regardless of condition.

The Cassida 85 has been engineered to tackle counterfeit bills head on. By incorporating dual head MG (magnetic) and dual sensor UV (ultraviolet) detection systems, we've ensured the ultimate protection against counterfeit bills.

The Cassida 85 includes all the counting modes you would expect to find on a heavy-duty currency counter, including counts up to 9,999 bills, program batch amounts as low as 1 or as high as 999, and an add + batch mode that allows batching while totaling all counts.

The high capacity 1,000 bill hopper and 3-way selectable speed will ensure an uninterrupted, convenient count, even with the highest volume counts. A built-in handle makes the Cassida 85 easy to move around the office or to take to remote locations.

An optional dust collector helps reduce health risks associated with the airborne micro-particles abundant on bills. Placed under the unit, this unique feature requires no special care and does not interfere with any machine operations.

Features

- Three counting speeds accommodate both worn and new bills
- Operating modes: Count, add, and batch modes; add + batch mode
- High-capacity hopper holds 1,000 new bills

- Batch size ranges from 0-999
- Auto/manual start option
- Rugged, heavy-duty construction
- Optional remote display and dust collector
- User-adjustable to accommodate a wide range of currency, coupons, tickets and other documents
- World-friendly, with a universal input voltage of 100-240 VAC
